

Supplementary Fig. S5. PCR products corresponding to five SSR primer sets (16161, 818598, 2978, 11176 and 4865) separated on polyacrylamide gel. Two different banding patterns were observed: the first banding pattern (I) represents pathotypes 1(D1), 2(G1), 6(O1), 39(P1), 3(M1), 2(Ch1), and isolates #D22, #D14, #P2/15, #D12, and the second (II) represents pathotypes 8(F1), 18(T1) and isolate #D25. *DNA isolated from wart compost.
